ClaimsPAK+™

Process your claims quickly, accurately, and easily with automatic document classification

ClaimsPAK+

Medical forms have long been considered the "worst of the worst" in terms of complicated structured paper forms whose data must be extracted. Red ink, black ink, CMS, UB, medical, dental, pharmacy – the forms are endless and are endless in their differences from each other. For healthcare providers the burden and cost to process these documents has been significant.

With recent technological advances PaperFree has been able to solve these headaches – with ClaimsPAK+. ClaimsPAK+ was built from the ground up to work hand in hand with the world's leading capture software – EMC|Captiva. This robust toolkit utilizes a purpose-built capture platform for medical form classification and processing and can process documents faster and more accurately than other solutions available today. CMS1500 and UB04 processing are available out of the box and dental, pharmacy, and other forms can be easily added to the workflow as needed.

ClaimsPAK+ also works from a variety of input sources – mail, faxes, email, or other electronic transmissions – giving it flexibility to adapt to your workflow. Once in the system, ClaimsPAK+'s advanced IDR/OCR/ICR/OMR technology quickly classifies the form type and other supporting documents, extracts key processing information, and then populates that information into your backend system for easy retrieval later.

Features | Benefits

- **Automatically classifies medical documents**
- **Extracts key information from documents**
- **Fastest processing**
- **Easily add new medical form types**
- **Accepts input from multiple sources**

The Market Leader in Claims Processing

ClaimsPAK+

ClaimsPAK+ is the next evolution for the Captiva platform

ClaimsPAK+ not only replaces the legacy ClaimPack solution for FormWare but also provides significant improvements in virtually every area of the solution. Built on the latest Captiva platform technology, ClaimsPAK+ was built to take advantage of the latest in technology improvements including the use of advanced IDR (Intelligent Document Recognition) and advanced extraction capability for higher accuracy when extracting data from complex medical claim forms and attachments.

Desktop+

An improved user interface adds significant flexibility in the areas of the user interface as well as the ability to add additional functionality with the use of new plug-ins.

Designer and Rules Engines

Two powerful tools that allow complete configuration control and definition to the entire process. Add new forms, fields, or business rules with ease. Make changes without having to access code directly or deal with costly customizations.

Proven, efficient, out of the box workflow

The solution comes with a workflow already designed and ready to go to drive maximum efficiency. Use this initial workflow for your processing operations or simply as a baseline to start your own customization of a workflow designed to meet your specific business and operational needs.
Whether you are an existing Captiva user or are considering automating or updating your operation, ClaimsPAK+ provides the ability to process medical claims fast, efficiently, and with the highest degree of accuracy.
